Rotary Lobe Pumps

Excellent Quality

Unlimited Pursuit

Beijing Pumpseen Pumps Co., LTD
Four series with 14 sizes.

Pumped volumes from 1 – 800 m³/h
Pump pressures of up to 12 bar

All pump models are manufactured using single piece construction. That won’t be copied easily. The PSC, PSD, PSF and PSH series allow for a rated capacity between 5–3,500 usgpm. Whatever pump size is right for you depends on its intended purpose, installation location and the characteristics of the pumped fluid. Whatever you need, we’ll give you thorough technical advice.

When we select a rotary lobe pump model for you, we consider the large variety of different pump sizes and materials available, including the best suited shaft seal and drive selection, so that your customized pump is built for its intended use. The pump casing is constructed using grey cast iron as standard. It is given either an abrasive-resistant coating or is finished entirely in stainless or duplex steel for corrosive applications.

All elastomers can be supplied in an almost unlimited material range with various characteristics. Our performance driven, reliable and robust pumps benefit not only from the Maintenance in Place Feature but also from high efficiencies resulting in low energy consumption, reducing the life cycle costs to a minimum.
And now multiply.

Worldwide unique: the significant rotor variety.

**Rotor**
- Dual-lobe, linear
  - The Allrounder
  - entirely elastomer coated
  - for aggressive and abrasive fluids

**Rotor**
- Tri-lobe, screw profile
  - entirely elastomer coated
  - with non-wetted core
  - with low pulsation
  - large sealing area

**Rotor**
- Tri-lobe, linear
  - entirely elastomer coated
  - for aggressive and abrasive fluids
  - large sealing area

**Rotor**
- Tri-lobe, linear
  - PTFE or Plastics coated
  - for chemically problematic fluids
  - solvents-resistant

**Rotor**
- Dual-lobe, butterfly profile
  - Metal rotor
  - for solids and debris containing fluids
  - with long-living sealing line

**Rotor**
- Tri-lobe, butterfly profile
  - Metal rotor
  - for solids and debris containing fluids
  - with long-living sealing line

**Rotor**
- Tri-lobe, linear
  - Metal rotor
  - for solids and debris containing fluids
  - with low pulsation

**Rotor**
- Tri-lobe, screw profile
  - Metal rotor
  - for solids and debris containing fluids
  - with low pulsation

*patented

Different rotary lobe types with various materials of construction such as elastomer, plastic or metal are used depending on the fluid characteristics. Viscous, abrasive and aggressive pumped media can be handled easily with the variable and modular rotor design capabilities.

Thanks to the special, patented construction, the robust rotor core and durable shaft remain non-wetted. We consider all factors when determining the selection of the best suited rotor for each individual application, therefore meeting the special demands of our customers.

In case of changing operating conditions, different rotor designs can be fitted into an existing pump unit because of our modular pump design.
Construction, Drive and Assembly

The low number and compact nature of the individual components will astonish anyone that has disassembled a Pumpseen rotary lobe pump. The different sizes of the casings and rotors are manufactured in a single piece construction, quite different from the high number of components normally found in comparable pumps.

The result of course are robust and compact rotary lobe pumps, which are known for quiet, safe and reliable operation, long operational life and for ease of maintenance. The replacement of wear parts can be managed, in-situ, by service personnel in the blink of an eye without the removal of pipe systems or drive units. Simplicity is one of Pumpseen’s trademarks.

Pumpseen rotary lobe pumps are universally mountable and are suited for many different types of installation. For example, electric, combustion and hydraulic drives are used. Complete mobile aggregates can be manufactured to customer specification and are finished in our own workshop.
## Product Structure

<table>
<thead>
<tr>
<th>Feature</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Block construction</td>
<td>Timing gear in a one-piece construction casing with a strong bearing and durable gear wheel pairing.</td>
</tr>
<tr>
<td>Compact construction</td>
<td>High performance in a compact design.</td>
</tr>
<tr>
<td>Interior pump protection</td>
<td>Protection plates available from a selection of hardened steel, stainless steel, plastic or ceramic.</td>
</tr>
<tr>
<td>Life cycle costs</td>
<td>For the customer, capital cost, energy consumption, maintenance and downtime as well as replacement part pricing levels compare excellently with all other positive displacement pumps.</td>
</tr>
<tr>
<td>Maintenance in Place</td>
<td>Maintenance in Place: Replacement of wear parts in the blink of an eye, in-situ by service personnel. The way to go in the reduction of maintenance and downtime.</td>
</tr>
<tr>
<td>Pump casing</td>
<td>Made from high-quality grey cast iron, ductile iron, stainless steel or in duplex quality. Thanks to the pump casing protect liners construction an almost limitless operational lifetime is achieved.</td>
</tr>
<tr>
<td>Quench</td>
<td>The quench and control liquid filled intermediate chamber, between the pump casing and the timing gear, provides a high degree of safety and is supplied by Pumpseen as standard.</td>
</tr>
<tr>
<td>Quick-release cover</td>
<td>This is the entrance door to the interior of the pump and provides the quickest possible access to all parts in contact with the pumped medium.</td>
</tr>
<tr>
<td>Rotary Lobe Pumps</td>
<td>Self-priming, valveless positive displacement pumps guarantee almost pulsation-free and smooth flow patterns; reversible flow by switching the flow direction.</td>
</tr>
<tr>
<td>Rotor materials</td>
<td>Coatings to suit intended usage made from elastomers, plastic, all-metal including stainless steel.</td>
</tr>
<tr>
<td>Rotors</td>
<td>The patented rotors with quickly exchangeable rotor tips, elastomer coated or readjustable; screw profile design for almost pulsation-free pumping.</td>
</tr>
<tr>
<td>Shaft seal</td>
<td>Supplied as standard with strong mechanical seal in different constructions and materials, optional with multi-seal or packing.</td>
</tr>
<tr>
<td>Smooth running</td>
<td>Large bucket geometry and short passage through the pump provide a smooth transfer of the pumped fluid.</td>
</tr>

Quick Maintenance Features

Both, repair- and downtime cost money. Production and process time should not be lost due to maintenance. Following this basic principle, Pumpseen has been constantly striving to perfect its rotary lobe pumps. The result is an extremely efficient, reliable and easy to maintain pump aggregate that is worldwide unmatched. All replacement and wear parts are extremely durable, resilient and affordable. You won’t be forced into any expensive maintenance contracts with Pumpseen – simply carry out any maintenance and repairs yourself! Maintenance in Place means that all replaceable parts can be easily installed and removed by maintenance personnel, in-situ, without having to remove any pipe or drive systems.

Reversible flow direction

Rotary lobe pumps are self-priming, valveless positive displacement pumps. The screw rotor guarantees almost pulsation-free, smooth running. Reversible flow is achieved by simply switching the rotation direction. Rotary lobe pumps are therefore suitable for both loading and unloading applications.

The quick-release cover enables easy access to the inner components of the pump. All wetted parts can be quickly maintained and replaced when necessary – without removal of pipe or drive system.

Flow rates are in 5,000 usgpm.
Industries, Application and Pumped Media

- Wastewater and biosolids processing
- Chemical, ceramic, pharmaceutical and oil industries
- Paints, coatings and synthetic materials
- Fats, oil, grease and soap
- Starch and sugar mills
- Liquid raw materials, i.e. latex
- Pulp and Paper
- Meat and fish processing
- Fruit and vegetable processing
- Renewable energy production
- Clay and lime, aggregate industry
- Marine, Shipyards, and disaster protection
